COLLAST	@157	character, YYMMDD, 6.
STRKBEG	@164	character, YYMMDD, 6.
STRKEND	@171	character, YYMMDD, 6.;

Notes on Public Access Tapes:

General:
a) Field names correspond to those used the for master database files, so descriptions of use and codes apply.

Exclusions:
a) Settlements for which the parties requested confidentiality have been removed from the public access files for each year.

b) The public access files exclude information that may pertain to confidential business data (e.g, earnings).

c) Beginning in 1985, we modified the use of the benefit change fields. Prior to 1985, this group of fields was used to indicate change in various benefit areas. Because no provision was made to code for the existence of a benefit, in most cases, it was decided these fields had limited utility, and we discontinued their use for this purpose.

d) We have removed fields which have been used for different purposes than originally intended (e.g, TYPEWKR has been used for internal unit management purposes rather than as a worker descriptor).

Additions:

a) Beginning in 1983, we began using an external file to supplement COLA provision description codes. Data in the public access files for 1983 thru 1986 have been updated with the new codes.
